

Changing the way the world works

How Jabra unlocks the full potential of Copilot in Microsoft Teams

 Microsoft 365

Take the Lead in Generative AI

As AI adoption continues to grow, Jabra leads the way in revolutionizing the way the world works – allowing you to bring your customers the freshest experiences, first.

We collaborate with Microsoft directly. This close-knit partnership ensures our products are certified to **extract the very best from Microsoft's latest AI tools**, like Copilot in Microsoft Teams.

Designed with world-leading professional microphones, our **Evolve2 and Engage headsets ensure over 97% accuracy of voice pick-up and transcriptions** for Copilot in Teams¹, no matter how loud the background or the work environment.

Our PanaCast 50 is the first front-of-room video bar certified as an Intelligent Speaker for Microsoft Teams. With cutting-edge voice recognition technology, it **provides precise transcriptions and identifies up to 10 voices in the meeting room, ensuring accurate speaker attribution** (name of who said what) and optimized AI-powered meeting recaps and Copilot experiences in Microsoft Teams.

These AI-driven experiences not only boost efficiency and enhance the overall productivity of meetings – they offer a comprehensive solution that saves time, eases mental workload, and ultimately, boosts employee well-being with more freedom to focus on the tasks that make the most of their expertise.

By offering solutions that enhance Microsoft's latest AI tools, you can help businesses fully leverage their investment in Copilot licenses in Teams² – driving your Microsoft solutions sales and growing customer satisfaction. This not only helps you to retain existing customers, but it presents a huge opportunity to attract new ones too.

Why Jabra PanaCast 50 for Copilot in Teams?

Revolutionizing every meeting room

PanaCast 50 seamlessly integrate with Microsoft Teams AI-driven capabilities. It is the first front-of-room video bar certified as an **Intelligent Speaker** for Microsoft Teams thanks to its **advanced voice recognition technology**:

- Boasting nine impressive Edge processors, including two Edge AI processors that adapt dynamically to **enhance new AI-driven experiences in Teams** – ensuring a future-proof investment.
- Beamforming 8-microphone technology and Precision voice detection algorithms that automatically identify and **remove residual echo and static noise** from the conversation.
- Full duplex technology to **catch every word**, even when people are speaking at the same time.
- Provides **accurate transcriptions** and reduce 'word error rate' (indicates how often AI misinterprets data).
- Identifies up to 10 voices in the meeting room, ensuring **accurate speaker attribution** (name of who said what) for optimized AI-powered meeting recaps and Copilot experiences.

Here are the optimized Microsoft Teams and Copilot experiences

- Accurately summarize what was discussed during meetings in the Teams chat, channel, meeting, or call
- Generate a list of insightful questions to ask people in any Teams chat, channel conversation, meeting, or call
- Accurate Intelligent recap and action suggestions (during & after meeting) - Organize meeting action items so you can get to what's important, quickly
- Real-time meeting prompts – suggest follow-up questions, what decisions were made, list different opinions by topic, list the ideas that were discussed
- Bring together data from other documents, presentations, emails, calendar in Microsoft Teams (throughout Microsoft 365 apps including Outlook, PowerPoint, Word, Excel).

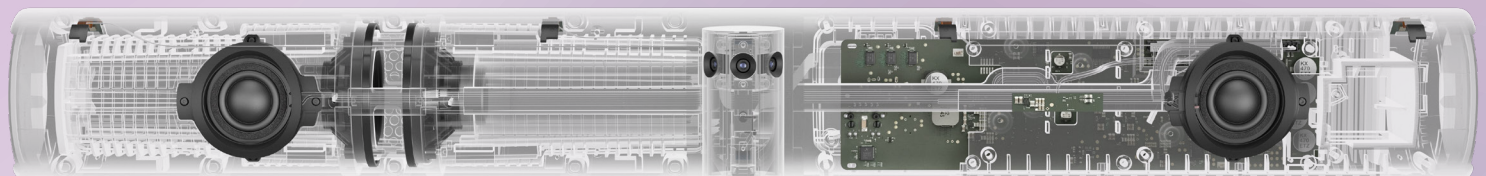

“

Transform sales functions:

By using Copilot for Microsoft 365, Microsoft salespeople saved 90 minutes per week; 83% of them felt more productive; and 67% were able to parlay the time savings into more time with customers.
